

FyroChain (FYRO)

Official Tokenomics Document

Version 1.0 | March 2026

fyrochain.org | Chain ID: 511 | Proof of Stake

1. Project Overview

FyroChain is a Layer-1 blockchain ecosystem built for speed, security, and scalability. Developed by Shahreyarr & Sadik Anwar under DigitalEdge Solutions, FyroChain aims to become South Asia's premier community-driven blockchain platform — EVM-compatible, developer-friendly, and designed for real-world utility.

Property	Value
Blockchain Name	FyroChain
Native Token	FYRO
Chain ID	511
Network	FyroMainnet
Consensus	Proof of Stake (PoS)
Block Time	~5 seconds
EVM Compatible	Yes
Explorer	fyrochain.org
Max Supply	21,000,000 FYRO
Decimals	18
Token Type	Native Coin (not ERC-20)

2. Token Supply & Distribution

FyroChain follows a fixed maximum supply model, inspired by Ethereum's economic principles. Total supply is capped at 21,000,000 FYRO — creating a deflationary asset with long-term value preservation.

Allocation Category	% of Supply	FYRO Amount	Purpose
Public Sale / Exchange Listing	40%	8,400,000 FYRO	CEX/DEX listings, public trading
Staking & Validator Rewards	25%	5,250,000 FYRO	PoS validator incentives, staking APY
Ecosystem & Dev Fund	15%	3,150,000 FYRO	dApp grants, developer incentives
Marketing & Partnerships	10%	2,100,000 FYRO	Exchange listings, growth campaigns
Team & Founders	10%	2,100,000 FYRO	Core team — 24-month vesting

Note: Team allocation is subject to a 6-month cliff and 24-month linear vesting schedule to ensure long-term commitment and prevent early sell pressure.

3. Ethereum-Inspired Economic Model

FyroChain's tokenomics are directly inspired by Ethereum's proven economic model, adapted for a lean, high-performance Layer-1 chain.

Feature	Ethereum (ETH)	FyroChain (FYRO)
Consensus	Proof of Stake	Proof of Stake
Max Supply	~120M (dynamic)	21,000,000 (fixed)
Block Time	~12 seconds	~5 seconds
EVM Compatible	Yes (native)	Yes
Gas Token	ETH	FYRO
Staking Rewards	~3-4% APY	~5% APY
Fee Burning	EIP-1559 (partial burn)	Planned — Phase 2
Smart Contracts	Solidity	Solidity

Chain ID	1	511
----------	---	-----

4. Staking & Validator Economics

FyroChain uses a Proof of Stake consensus mechanism where validators earn FYRO rewards for securing the network. Anyone can become a validator by staking FYRO.

Parameter	Value
Minimum Stake (Validator)	1,000 FYRO
Staking APY	~5% annually
Reward Source	Staking Rewards Pool (25% of supply)
Slashing Penalty	10% of stake for malicious behavior
Unbonding Period	7 days
Validator Set Update	Every epoch (100 blocks)

Staking rewards are distributed automatically every epoch, incentivizing long-term holding and network participation.

5. FYRO Token Utility

FYRO serves multiple functions within the FyroChain ecosystem:

- Gas Fees — All transactions on FyroChain require FYRO for gas payment
- Staking — Validators stake FYRO to participate in block production and earn rewards
- Governance — FYRO holders vote on protocol upgrades and parameter changes
- DEX Trading — FYRO is the base trading pair on FyroDEX
- dApp Payments — Third-party applications on FyroChain accept FYRO for services
- Exchange Listings — FYRO traded on CEX/DEX platforms globally

6. Vesting Schedule

To ensure long-term project health and prevent market manipulation, all insider allocations follow strict vesting schedules.

Allocation	Cliff	Vesting Period	Release
Team & Founders (10%)	6 months	24 months	Linear monthly
Ecosystem Fund (15%)	3 months	36 months	Milestone-based
Marketing (10%)	None	12 months	Quarterly
Public Sale (40%)	None	None	Fully unlocked at listing
Staking Rewards (25%)	None	5 years	Distributed per epoch

7. Development Roadmap

Phase	Timeline	Milestones
Phase 1 — Foundation	Q1 2026	Mainnet live, Explorer (FyroScan), FyroDEX, Exchange Listings
Phase 2 — Growth	Q2-Q3 2026	Public validators, CoinGecko/CMC listing, WFYRO on BSC/ETH
Phase 3 — Ecosystem	Q4 2026	Developer grants, NFT support, 3rd-party dApps, governance
Phase 4 — Scale	2027+	10+ validators, Layer-2 solutions, institutional partnerships

8. Technical Integration

FyroChain is fully EVM-compatible. Developers and exchanges can integrate using standard Ethereum tooling.

Parameter	Value
RPC URL	https://rpc.fyrochain.org
WebSocket	wss://rpc.fyrochain.org/ws
Chain ID	511 (0x1FF)
Explorer	https://fyrochain.org
GitHub	https://github.com/fyrochain/FyroBlockchain

Wallet Support	MetaMask, Trust Wallet, TokenPocket
Token Standard	Native Coin (EVM-compatible)
Smart Contract Language	Solidity 0.8+
