

FYROCHAIN

Official Whitepaper

The Native Coin of FyroChain — A Layer-1 Proof of Stake Blockchain

Version 1.0 | March 2026

fyrochain.org | Chain ID: 511 | github.com/fyrochain

Built by Shahreyarr & Sadik Anwar | DigitalEdge Solutions | Jaipur, India

Abstract

FYRO is the native coin of FyroChain, a fully EVM-compatible Layer-1 blockchain built on a Proof of Stake consensus mechanism. FyroChain is designed to deliver fast, secure, and cost-efficient decentralized transactions, smart contract execution, and on-chain governance for individuals, developers, and enterprises across South Asia and beyond.

This whitepaper presents the technical architecture, economic model, validator system, and long-term vision of FyroChain — a blockchain ecosystem where FYRO serves as both the fuel for computation and the foundation of decentralized governance.

1. Introduction

1.1 The Problem

The global blockchain ecosystem is dominated by a handful of Layer-1 networks — primarily Ethereum, BNB Chain, and Solana. While these platforms offer powerful capabilities, they present significant barriers for users and developers in emerging markets:

- High transaction fees make microtransactions impractical
- Centralized validator sets reduce true decentralization
- Complex onboarding alienates non-technical users
- Lack of regional blockchain infrastructure in South Asia

1.2 The Solution — FyroChain

FyroChain is a purpose-built Layer-1 blockchain that addresses these challenges through a lightweight Proof of Stake consensus, EVM compatibility for seamless developer adoption, and a fixed-supply native coin — FYRO — designed for long-term value preservation.

FyroChain combines the best elements of Ethereum's architecture with the speed and accessibility needed for real-world adoption in high-growth markets.

2. Network Architecture

2.1 Technical Specifications

Parameter	Specification
Blockchain Name	FyroChain
Native Coin	FYRO
Chain ID	511
Network	FyroMainnet
Consensus Mechanism	Proof of Stake (PoS)
Block Time	~5 seconds
EVM Compatible	Yes — full Ethereum tooling support
Smart Contract Language	Solidity 0.8+
Max Supply	21,000,000 FYRO (fixed)
Decimals	18
RPC Endpoint	https://rpc.fyrochain.org
WebSocket	wss://rpc.fyrochain.org/ws
Block Explorer	https://fyrochain.org (FyroScan)
GitHub	github.com/fyrochain/FyroBlockchain

2.2 Proof of Stake Consensus

FyroChain uses a Proof of Stake consensus model where validators are selected to produce blocks proportionally to their staked FYRO holdings. This mechanism ensures:

- Energy efficiency — no computational mining required

- Economic security — validators risk losing staked FYRO if they act maliciously
- Permissionless participation — anyone holding 1,000+ FYRO can become a validator
- Fast finality — transactions confirmed within 1-2 block times (~5-10 seconds)

2.3 EVM Compatibility

FyroChain is fully EVM (Ethereum Virtual Machine) compatible. This means all tools, wallets, and smart contracts built for Ethereum work natively on FyroChain without modification — including MetaMask, Hardhat, Truffle, Remix IDE, and all Solidity code.

3. FYRO — The Native Coin

3.1 Role of FYRO

FYRO is not an ERC-20 token — it is the native coin of FyroChain, serving as the fundamental unit of value and utility within the ecosystem:

Function	Description
Gas Fees	All transactions on FyroChain require FYRO for gas payment
Staking	Validators stake FYRO to participate in block production
Governance	FYRO holders vote on protocol upgrades and parameters
DEX Trading	Base trading pair on FyroDEX
dApp Payments	Native currency for applications built on FyroChain
Bridge Asset	WFYRO (wrapped) available on Ethereum and BSC

3.2 Supply Model — Fixed & Deflationary

FYRO follows a fixed maximum supply model — inspired by Bitcoin's scarcity principle and Ethereum's economic discipline. Total supply is permanently capped at 21,000,000 FYRO.

Allocation	Percentage	FYRO Amount	Vesting
Public Sale & Exchange	40%	8,400,000 FYRO	Fully unlocked at listing
Staking & Validator Rewards	25%	5,250,000 FYRO	Released over 5 years per epoch
Ecosystem & Dev Fund	15%	3,150,000 FYRO	3-month cliff, 36-month vesting

Marketing & Partnerships	10%	2,100,000 FYRO	Quarterly over 12 months
Team & Founders	10%	2,100,000 FYRO	6-month cliff, 24-month linear

4. Validator & Staking System

4.1 Becoming a Validator

FyroChain operates an open validator set — any participant holding the minimum required FYRO can operate a validator node and earn rewards for honest block production.

Parameter	Value
Minimum Stake	1,000 FYRO
Staking APY	~5% annually
Unbonding Period	7 days
Slashing — Downtime	1% of stake
Slashing — Double Sign	10% of stake
Epoch Length	100 blocks
Reward Distribution	Every epoch automatically

4.2 Staking Rewards

Validators earn FYRO rewards from the dedicated Staking Rewards Pool (25% of total supply = 5,250,000 FYRO), distributed over 5 years. This creates a sustainable, predictable reward schedule that incentivizes long-term network participation without inflationary pressure.

5. FyroChain Ecosystem

5.1 FyroScan — Block Explorer

FyroScan (fyrochain.org) is FyroChain's native block explorer, providing real-time data on blocks, transactions, addresses, smart contracts, and token analytics — comparable to Etherscan for Ethereum.

5.2 FyroDEX — Decentralized Exchange

FyroDEX (fyrochain.org/dex) is the native decentralized exchange for FyroChain, enabling permissionless trading of FYRO and any token deployed on the network. FyroDEX uses an automated market maker (AMM) model with FYRO as the base trading pair.

5.3 Smart Contract Platform

FyroChain supports full Solidity smart contract deployment. Developers can deploy ERC-20 tokens, NFT collections, DeFi protocols, and any Ethereum-compatible application directly on FyroChain using familiar tools.

5.4 Cross-Chain Bridge

WFYRO (Wrapped FYRO) is planned for deployment on Ethereum and BNB Chain, enabling cross-chain liquidity and expanding FYRO's reach to millions of existing DeFi users.

6. FyroChain vs. Ethereum

Feature	Ethereum	FyroChain
Consensus	Proof of Stake	Proof of Stake
Block Time	~12 seconds	~5 seconds
EVM Compatible	Yes (native)	Yes
Max Supply	~120M (variable)	21,000,000 (fixed)
Avg Gas Fee	\$0.50 - \$50+	< \$0.01
Smart Contracts	Solidity	Solidity
Staking APY	~3-4%	~5%
Decentralization	1M+ validators	Growing — open to all
Target Market	Global	South Asia + Global

7. Roadmap

Phase	Timeline	Key Deliverables
Phase 1 — Launch	Q1 2026	Mainnet live, FyroScan, FyroDEX, VinDAX listing, CoinGecko/CMC
Phase 2 — Growth	Q2-Q3 2026	Public validators open, WFYRO on BSC/ETH, MEXC/Gate.io listing

Phase 3 — Ecosystem	Q4 2026	Developer grants, NFT marketplace, governance voting, 10+ dApps
Phase 4 — Scale	2027+	20+ validators, Layer-2 solutions, institutional partnerships, mobile wallet

8. Team & Organization

Name	Role	Background
Shahreyarr (Kamran Alam)	Co-Founder & Lead Developer	MSc Cyber Security, Amity University Rajasthan; MBA Entrepreneurship; Blockchain & Web3 specialist
Sadik Anwar	Co-Founder & Operations	DigitalEdge Solutions; Business development & strategy

FyroChain is developed under DigitalEdge Solutions, a technology company based in Jaipur, Rajasthan, India. The project is open-source and community-driven.

9. Legal Disclaimer

This whitepaper is for informational purposes only and does not constitute financial, investment, or legal advice. FYRO is a utility coin designed for use within the FyroChain ecosystem. Cryptocurrency investments carry risk. Please conduct your own research before participating.

FyroChain does not guarantee any specific price, return, or outcome for FYRO holders. The development roadmap is subject to change based on technical and market conditions.

 **FYRO**

الورقة البيضاء الرسمية

العملة الأصلية لـ FyroChain — بلوكشين من الطبقة الأولى بإثبات الحصة

الملخص التنفيذي

FYRO هي العملة الأصلية لشبكة FyroChain، وهي بلوكشين متوافقة مع EVM مبنية على آلية إجماع إثبات الحصة (Proof of Stake). صُممت FyroChain لتقديم معاملات لامركزية سريعة وأمنة وبتكلفة منخفضة، مع دعم كامل لتنفيذ العقود الذكية والحوكمة على السلسلة.

تعرض هذه الورقة البيضاء البنية التقنية والنموذج الاقتصادي ونظام المُحققين والرؤية طويلة المدى لـ FyroChain.

1. نظرة عامة على الشبكة

1.1 المواصفات التقنية

القيمة	المعامل
FyroChain	اسم البلوكشين
FYRO	العملة الأصلية
511	معرف السلسلة
(Proof of Stake) إثبات الحصة	آلية الإجماع
ثوانٍ 5~	وقت الكتلة
(ثابت) 21,000,000 FYRO	الحد الأقصى للإمداد
نعم	EVM متوافق مع
أقل من 0.01\$	رسوم الغاز
https://fyrochain.org	مستكشف الكتل
github.com/fyrochain/FyroBlockchain	GitHub

1.2 آلية إثبات الحصة

تستخدم FyroChain نموذج إجماع إثبات الحصة، حيث يتم اختيار المُحققين لإنتاج الكتل بما يتناسب مع حصتهم من FYRO المُرهونة. يتضمن هذا النموذج:

- كفاءة في استهلاك الطاقة — لا يلزم تعدين حسابي
- أمان اقتصادي — يخاطر المُحققون بخسارة حصتهم عند التصرف بشكل ضار
- مشاركة مفتوحة — يمكن لأي شخص يمتلك FYRO +1,000 أن يصبح مُحققاً
- تأكيد سريع — تأكيد المعاملات في 5-10 ثوانٍ

2. توزيع عملة FYRO

الاستحقاق	المقدار	النسبة	الفئة
مفتوح عند الإدراج	8,400,000 FYRO	40%	البيع العام والبورصات
سنوات تدريجياً 5	5,250,000 FYRO	25%	مكافآت التحقق والرهن
شهرًا 36	3,150,000 FYRO	15%	صندوق النظام البيئي
شهرًا ربعيًا 12	2,100,000 FYRO	10%	التسويق والشراكات
أشهر + 24 شهرًا خطي 6	2,100,000 FYRO	10%	الفريق والمؤسسون

3. خارطة الطريق

المرحلة	الجدول الزمني	الأهداف الرئيسية
المرحلة 1 — الإطلاق	Q1 2026	الإدراج في البورصات، FyroScan، FyroDEX، إطلاق الشبكة
المرحلة 2 — النمو	Q2-Q3 2026	MEXC إدراج، BSC/ETH على WYFRO، فتح المُحققين العاميين
المرحلة 3 — النظام البيئي	Q4 2026	التصويت الحوكمي، NFT منح المطورين، سوق
المرحلة 4 — التوسع	2027+	شراكات مؤسسية، Layer-2 مُحقق، حلول 20+

إخلاء المسؤولية القانونية

هذه الورقة البيضاء لأغراض إعلامية فقط ولا تشكل نصيحة مالية أو استثمارية أو قانونية. FYRO عملة مرافق مصممة للاستخدام ضمن نظام FyroChain البيئي. استثمارات العملات الرقمية تنطوي على مخاطر. يرجى إجراء بحثك الخاص قبل المشاركة.
